

IGCSE or IB Maths - which actually opens more doors?

Neither, on its own

Universities read the grade and the depth, not the acronym. A strong IGCSE record beats a scraped IB one at every admissions desk we have dealt with.

The real question is teaching depth

Ask how many periods a week the school gives to maths, and who teaches the top set. That predicts outcomes far better than the curriculum badge.

IB rewards breadth, IGCSE rewards precision

A child who likes closing a problem cleanly often thrives in IGCSE. One who enjoys connecting ideas across subjects tends to prefer IB.

Switching later is harder than parents expect

The two build sequence differently. A mid-stream move usually costs a term of catching up, so choose for the child you have, not the one you hope for.
